PROCESS DOCUMENTATION & SYSTEMS SUPPORT PORTFOLIO

Business Systems | Workflow Documentation | QA | Meeting Minutes | Process Tracking

carladrian.longasa@gmail.com | [LinkedIn](#)

SANITIZATION NOTICE

These samples are representative recreations of professional documentation work. Company names, client names, order numbers, system environments, internal paths, personal data, and other confidential details have been removed or replaced with generic placeholders.

PORTFOLIO CONTENTS

01

ERP Case Card Navigation Guide

Step-by-step system navigation and user instruction

02

Inventory Item Navigation SOP

Structured ERP training / onboarding documentation

03

Customer Ledger Validation Guide

Transaction verification and QA checkpoints

04

Healthcare Workflow Meeting Minutes

Process discovery, decisions, risks, and action items

05

Training Roadmap & Progress Tracker

Multi-phase workflow planning and status tracking

ERP CASE CARD NAVIGATION GUIDE

Sanitized system-navigation training sample based on Microsoft Dynamics 365 Business Central / PrintVis work.

PURPOSE

Provide a clear, repeatable path for a user to open a Case Card from the Case Management list without relying on tribal knowledge.

PROCESS FLOW

STEP	ACTION	VALIDATION / RESULT
1	Open the production/print module	Confirm the correct functional area is selected from the ERP homepage.
2	Open Case Management	Display the list of active and historical cases.
3	Select the required case	Use identifiers such as case ID, order number, job name, status, or requested shipment date.
4	Open the Case Card	Confirm the selected case opens and shows the expected production/order context.

DOCUMENTATION DESIGN NOTES

- Uses numbered steps and a single action per step to reduce ambiguity.
- Pairs navigation instructions with validation points so users can confirm they are on the correct page.
- Separates system navigation from business-process decisions, making the guide suitable for onboarding and repeat use.

SKILLS DEMONSTRATED

ERP Navigation • User Documentation • Process Mapping • Onboarding Support • Attention to Detail

INVENTORY ITEM NAVIGATION SOP

Sanitized excerpt of an ERP inventory training exercise.

PURPOSE

Guide a user from the ERP homepage to the Items list as the starting point for creating or maintaining inventory items.

NAVIGATION EXCERPT

STEP	ACTION	VALIDATION / RESULT
1	Select Inventory from the top navigation	Verify the inventory submenu becomes available.
2	Open Items	Confirm the Items list loads and displays item identifiers, descriptions, types, quantities, and related details.

EXAMPLE USER CHECKLIST

- I am in the Inventory functional area.
- The Items list is open before I begin item setup or review.
- I can identify the correct item by number and description.
- I can access item details without modifying unrelated records.

SCOPE NOTE

This portfolio excerpt intentionally shows only the navigation portion supported by the original training material. Client-specific item setup values and internal data have been excluded.

SKILLS DEMONSTRATED

SOP Writing • Inventory Workflow • Training Material • Structured Instructions • System Familiarity

CUSTOMER LEDGER VALIDATION GUIDE

Sanitized quality-control procedure for validating customer transactions and final balances.

PURPOSE

Verify that a customer invoice is linked to the correct order/case, posted correctly, and fully settled before an end-to-end business scenario is considered complete.

VALIDATION CHECKPOINTS

STEP	ACTION	VALIDATION / RESULT
1	Locate the customer account	Confirm the correct customer record is selected.
2	Identify the relevant order or case	Use the description or ERP/print information panel to match the transaction to the intended job.
3	Verify order/job linkage	Confirm order number and job name align with the transaction being reviewed.
4	Review ledger details	Check due date, discount date, applied entries, and detailed ledger links.
5	Verify the posted invoice	Confirm invoice status and original amount are correct.
6	Confirm final balance	Verify payment application and confirm Remaining Amount = \$0.00.

FINAL ACCEPTANCE CRITERIA

Invoice posted ✓ Payment applied ✓ Correct order/job linkage ✓ Remaining balance = \$0.00

SKILLS DEMONSTRATED

Financial QA • Data Validation • ERP Ledger Review • Audit Checkpoints • End-to-End Testing

HEALTHCARE WORKFLOW MEETING MINUTES

Sanitized meeting-minutes sample showing process discovery, risks, decisions, and action tracking.

MEETING OBJECTIVE

Understand the current healthcare-letter workflow, document production steps and ownership, identify manual work, and capture process-improvement opportunities.

DISCUSSION SUMMARY

Letter setup: Source documents are organized, the correct letter code is identified, supporting rules/attachments are checked, and the document template is prepared.

Template maintenance: Approved source content is transferred into the composition system while preserving controlled master styles and reusable resources.

Programming logic: Conditional content is driven by business rules such as reason codes, group identifiers, plan types, and member status.

Proof-data dependency: The template can be ready before proof data arrives; proof output and sequence reports are generated after validated data becomes available.

Proof review: Review includes content, variables, conditional logic, layout, page breaks, formatting, address blocks, and barcode elements.

Production approval: Approved output is recorded and retained as the reference version for future production or issue investigation.

KEY RISKS IDENTIFIED

- Heavy reliance on manual knowledge and individual experience.
- Manual proof tracking and file matching.
- Inconsistent source-document formatting.
- Incomplete project-level detail in shared tracking files.
- Physical/manual recordkeeping creating onboarding and accessibility challenges.

DECISIONS & ACTIONS

ITEM	OWNER	STATUS / NEXT STEP
Document remaining healthcare workflows	Process owners	Follow-up sessions required
Improve project / group-level tracking	Project coordination	Add missing breakdowns and identifiers
Review manual recordkeeping dependency	Team	Evaluate centralized electronic repository
Investigate differing data feeds	Technical / AppDev	Confirm source and handoff process

SKILLS DEMONSTRATED

Meeting Minutes • Process Discovery • Risk Identification • Action Tracking • Cross-Functional Coordination

TRAINING ROADMAP & PROGRESS TRACKER

Sanitized example of multi-phase ERP training planning and status management.

PURPOSE

Provide a structured roadmap for system training, exercises, access blockers, and end-to-end scenario readiness across multiple business-process phases.

ROADMAP STRUCTURE

PHASE	EXAMPLE SCOPE	TRACKING
System Fundamentals	Navigation, role centers, search, personalization, user settings	Started / Not Started / Blocked
Master Data Setup	Customers, vendors, items, resources and machines	Started / Not Started / Blocked
Sales Process	Estimates/quotes, approvals, sales-order conversion	Started / Not Started / Blocked
Production	Job planning, routing, materials, production execution	Started / Not Started / Blocked
Purchasing & Inventory	Purchase orders, receiving, inventory transactions	Started / Not Started / Blocked
Shipping & Billing	Partial/full shipments, invoicing, payment application	Started / Not Started / Blocked
Financial Review & Reports	Ledger review, balances, production and inventory reporting	Started / Not Started / Blocked
Administration & Capstone	Permissions/workflows and an end-to-end business scenario	Started / Not Started / Blocked

TRACKER FIELDS

Phase • Module • Task / Topic • Status • Owner • Completed • Remarks / Blocker

VALUE OF THE TRACKER

The roadmap makes progress visible, separates access blockers from incomplete work, and provides a structured path from system fundamentals through an end-to-end business scenario.

SKILLS DEMONSTRATED

Project Tracking • Training Roadmaps • Status Management • Blocker Documentation • Process Planning

THANK YOU

Additional work samples and role-specific documentation can be discussed during the interview process.
